Project 1 Data Cleaning and EDA

Purpose

Today you will turn the Project 1 outline into an analysis-ready data workflow. The focus is importing, inspecting, cleaning, transforming, and summarizing your project data.

Shared Group Workflow

Create or open one shared Google Doc for the group. Assign the four roles below, but have every member review and contribute to the same document and analysis files.

- **Member 1 – Data manager:** import the data and document its structure and provenance.
- **Member 2 – Cleaning lead:** record missing-value, recoding, and transformation decisions.
- **Member 3 – EDA lead:** produce summaries and exploratory plots linked to the research question.
- **Member 4 – Integration editor:** combine the work, check reproducibility, and update the shared outline.

In-Class Work

- (A) **Import and inspect.** Load the project data and check dimensions, variable types, missing values, and unusual entries.
- (B) **Clean and transform.** Rename variables, recode categories, create useful derived variables, and document all decisions.
- (C) **Exploratory summaries.** Summarize the response variable and the main candidate predictors.
- (D) **Exploratory plots.** Make plots that connect predictors to the response and reveal possible model assumptions.
- (E) **Check-in.** What cleaning decision matters most for your analysis, and why?

Deliverable

Submit the Project 1 progress materials through Gradescope or Blackboard by Tuesday, September 29 at 10:00 PM. Include cleaned-data notes, initial EDA, revised research questions, and the accessible shared Google Doc link.
