Project 2 Final Work Session

Purpose

Today you will finalize Project 2 by polishing simulation results, real-data analysis, interpretation, and the final written submission.

Shared Group Workflow

Use one shared Google Doc for the final report and one shared folder for simulations, data, code, tables, and figures. Assign the four roles below; every member must review the complete submission before it is uploaded.

- **Member 1 – Simulation editor:** verify scenarios, code, tables, and plots.
- **Member 2 – Real-data editor:** verify the model, intervals, diagnostics, and interpretation.
- **Member 3 – Conclusions lead:** explain the comparison between classical and bootstrap inference and state limitations.
- **Member 4 – Submission editor:** assemble files, check reproducibility, formatting, and the final shared link.

In-Class Work

- (A) **Finalize simulations.** Confirm that all scenarios run reproducibly and that tables or plots summarize the key results.
- (B) **Finalize real-data analysis.** Check the final model, intervals, diagnostics, and interpretation.
- (C) **Write conclusions.** Explain when classical inference worked well, when bootstrap inference helped, and what limitations remain.
- (D) **Submission check.** Confirm that report, code, data, and output files are complete and reproducible.
- (E) **Check-in.** What is your main conclusion about classical versus bootstrap inference?

Deliverable

Submit the Project 2 writeup, code, and required supporting files through Gradescope or Blackboard by Sunday, November 8 at 10:00 PM. Include the shared Google Doc link and confirm that all four members reviewed the final files.
